## 3 Minor

- 1 Operative missed his footing on a step and fell backwards (PIB Process)not hurt just shocked. Rushing was the cause.
- 2) Operative pulled muscle in her arm trying to push a tight log onto a mandrel. Operative told to seek help if cores are too tight.
- 3) Operative strained his risk trying to cut some compound off the milling machine, new raw material has been introduced into the area, which is a harder tougher grade than usual. JAR to conduct risk assessment to establish SSOW.
