Safety Opportunities

The Windsor facility experienced no reportable or lost time accidents in the month of March. There was one OSHA recordable accident (thumb sprain) by an operator stripping tape from a core, but resulted in no lost time.

Windsor has established a power-truck driver accountability program in order to reduce machine traffic and any potential hazards associated with material handling. Windsor will be re-arranging job requirements and reducing the number of licensed forklift operators, allowing the more experienced operators to transport the bulk of the material handling duties and reducing overall risk.
