Safety Opportunities

DACR

1/ accident on converting and packaging site (Palissy): an operator has been hurt by a forklift truck on share area (production /warehouse).After hospital examination , the operator suffering of a bruise foot. Safety alert displayed)

we create a team working group to define new way of working to separate at the maximum possible the 2 activities in that shoopfloor.

2/ accident in the maintenance department during shutdown period: the maintenance manager trapped his finger during a big motor replacement

we need to better prepare this exceptional type of work and better think about the necessary tools we could need during that operation.we also indicate that we should never put a part of the body under a load.(Safety alert displayed)
