I. COMPLAINT INFORMATION

| Origination Date | 26 May 2011 | | | | | |
|---|---|-------------------|-------------|--|--|--|
| Sales Name | Rob Taylor | Sales Office | Ashton | | | |
| Telephone | | Fax Number | | | | |
| Email | rob.taylor@scapa.com | | | | | |
| Customer Complaint Ref | | | | | | |
| Customer Name | Bedford Industries Of Worthington | | | | | |
| SAP Customer Number | 126786 | Customer Order N° | | | | |
| Customer Part Number | | | | | | |
| 1) Invoices And Itame | o On Complaint | | | | | |
| 1) Invoices And Items | S On Complaint | | | | | |
| (a) SAP Invoice Number | 9700038881 | Invoice Date | 18 May 2011 | | | |
| - Material | 154979 | Batch | WIN0024331 | | | |
| | Material Description UP5040 76#/5MIL REIN[A] 6IN X 1080FT | | | | | |
| ı | | | | | | |
| | | | | | | |
| 2) Problem Description | | | | | | |
| Customer is experiencing issue of liner cracking. | | | | | | |
| Actions Requested From The Customer | | | | | | |
| Corrective action and root cause. | | | | | | |
| | | | | | | |
| 3) Containment Actio | ns | | | | | |

II. EVALUATION AND ACTION

| Sample/photo Received | Yes | | | | | | | |
|--|-----------------------|-------------------------------|-----------------------------------|------------------------|--|--|--|--|
| Date | 17 Jun 2011 | | | | | | | |

| Team Leader | | | | | | | | |
| Is Complaint Valid? | No | Return The Goods | | Dispose The Goods | | | | |
| Comments | | | | | | | | |
| Close complaint as not justified, while there maybe some indication that the "new liner" is slightly weaker then the "old liner", it is consistent with all specifications. Furthermore, there is indication that the "new liner" may be under more tension then the "old liner". In addition, the "new liner" samples were thinner, then the "old liner", which would contribute to its weakness. | | | | | | | | |
| 1) Analysis | | | | | | | | |
| R&D Chemist did analysis a | as summarized with | the attached report. In Su | ımmary, it appears that tension | is being placed on the | | | | |
| liner which is resulting in it | stretching. While the | e "old liner" appears to have | ve a failure mode of delamination | on, the "new liner" | | | | |
| | | | ce between the shrinkage rate | of the "old liner" and | | | | |
| "new liner" are consistent w | vith more tensioning | on "new liner". | | | | | | |
| Additionally, the "old liner" and "new liner" were measured for tensile strength at 12in/min and the width was measured as well. | | | | | | | | |
| Tensile: "old liner" = ~16.75 | ilbs | | | | | | | |
| "new liner" = ~14.25lbs | | | | | | | | |
| Widths: "old liner" = 0.325in | | | | | | | | |
| "new liner" = 0.295in | | | | | | | | |
| Since Width (cross-sectional area) effects Tensile strength, correcting for width yields: | | | | | | | | |
| Tensile: "old liner" = ~51.5lbs/inch "new liner" = ~48.3lbs/inch (difference: ~6.3%) | | | | | | | | |
| Some of this difference may also be due to the small sample size, both quantitatively and the physical width of the samples. Furthermore, review of our records hasn't indicated any raw or finished product that is out of specification. | | | | | | | | |
