	1100 Transp. 50mm x 66m Accord?on		

2) Description Du Problème Identifié Par Le Client

In the 90s the customer used the reference 595 of 3M.

When 3M stopped this product, they are used the reference 1100 SCAPA which worked up to here. For some time they receive complaints of their customers who complain about problems of anchoring where there is our adhesive.

They set up a trial test (IGT: test of anchoring of the ink with a standard to be respected)

They made comparative test of our reference (on 1100 SCAPA and 3M 595) with various speeds. Manifestly the ink is torn away on our reference. This drift seemed since 6 in 8 months

The customer asks the question to know if we changed anything in the release coat from 1100 in the last 6 to 8 months. He sent us the tests realized with 2 products (3M and SCAPA) and sent 2 rlx Scapa and 1 rl 3M so that we made comparative tests of

anchoring.
